The Selection Committee
Study & Work in Korea: Scholarship & Career Opportunities
Kyungnam University Program, c/o Budi Luhur University

Subject: Application for the Kyungnam University Scholarship & Career Program

Dear Members of the Selection Committee,

My name is Febrian Valentino, a seventh-semester Software Engineering student at Universitas Bina Sarana Informatika (UBSI), Jakarta. I am writing to express my sincere enthusiasm for the Study & Work in Korea program offered by Kyungnam University in collaboration with Budi Luhur University, Gyeongsangnam-do Province, and the Gyeongnam ICT Association.

Attending the information session on 16 October 2026 confirmed that this is the opportunity I have been working toward. Korea is a global leader in technology and digital innovation, and a program that combines academic study with real career pathways matches exactly how I want to grow as a technology professional.

Throughout my studies, I have turned learning into concrete results:

- **Academic & Professional Certification:** earned national certification as a Certified Program Analyst (BNSP / LSP UBSI) and completed the Database Systems competency program at G2 Academy, building strong foundations in software engineering and database architecture.
- **Full-Stack Software Development:** engineered end-to-end web applications including Rose Cafe (POS & QR ordering with RBAC), Hostel Barbershop (appointment booking engine), and Who am I? (real-time online multiplayer game using PHP & JavaScript).
- **Artificial Intelligence & Tech Skills:** skilled in AI API integration, prompt engineering, and Python programming, combining modern AI-assisted development workflows with backend scripting and full-stack web development.
- **Cybersecurity Foundations:** certified across Palo Alto Networks' Cybersecurity Fundamentals, Network Security Fundamentals, and Security Operations Fundamentals, applying a security-conscious mindset to software design.
- **Professional Experience:** currently working as a Web Development & Software Engineering Intern at PT. Cipta Teknologi Cendekia, where I architected MONITA (Monitoring Intern Tracking System) and refactored the company's official profile web application.

What drives me most is the chance to combine rigorous learning with international exposure. I want to deepen my skills in artificial intelligence, full-stack software engineering, and modern web architectures within Korea’s advanced technology ecosystem, where AI and software solutions drive real industry transformation, while adapting to a work culture built on discipline and innovation. In return, I bring a fast-learning mindset, a proven record of delivering functional software projects, and strong engineering discipline. In the long term, I hope to bring this knowledge back to Indonesia and contribute to its digital industry.

Thank you for considering my application. I would be honored to represent my university in this program and would welcome the opportunity to discuss my application further.

Sincerely,

Febrian Valentino
Software Engineering Student, Universitas Bina Sarana Informatika
